BACKED BY 8 CLINICAL STUDIES

UNIVERSITY OF TAMPA

In a study of 18–21-year-old men, the Fortetropin group saw a 3x greater increase in lean muscle mass vs. the placebo.

KANSAS STATE UNIVERSITY

In study of 100 canines recovering from TPLO surgery, the Fortetropin group saw a significant decrease in atrophy, a marked increase in rate of recovery, and an improvement in percentage of weight supported by the affected limb.

UNIVERSITY OF CALIFORNIA BERKELEY

In a study of 60-75 year-old men and women, the Fortetropin group saw on average an 18% increase in rate of muscle protein synthesis.

KANSAS STATE UNIVERSITY

In a study measuring quality of life in geriatric and arthritic canines, the subjects taking Fortetropin had statistically significant lower L.O.A.D. scores in weeks 6 and 12 relative to baseline.

UNIVERSITY OF FLORIDA

Fortetropin supplementation was found to be safe and well-tolerated in cats.

MCMASTER UNIVERSITY

Fortetropin supplementation prevented a rise in serum myostatin levels in subjects who underwent unilateral leg immobilization.

NORTH CAROLINA STATE UNIVERSITY

In a study of cats suffering from Chronic Kidney Disease, over 70% of the Fortetropin group saw improved lean muscle mass, with no adverse renal side effects.

PETALUMA EQUINE VET HOSPITAL

Fortetropin supplementation was found to be safe and well-tolerated in horses.
